

**Table: Summary of completeness of outcome specification for three most common outcomes, by outcome and condition**

CONDITION	OUTCOME DOMAIN	OUTCOME		
		Visual acuity n (%)	Quality-of-life n (%)	Contrast sensitivity n (%)
Age-related macular degeneration (AMD)	Total number of SRs	16	16	9
	Title	16 (100)	16 (100)	9 (100)
	Technique/Instrument	8 (50)	0 (0)	3 (33)
	Measure	12 (75)	1 (6)	2 (22)
	Time-point(s)	13 (82)	8 (50)	8 (89)
Cataract	Total number of SRs	15	12	4
	Title	15 (100)	12 (100)	4 (100)
	Technique/Instrument	10 (67)	2 (17)	1 (25)
	Measure	9 (60)	1 (8)	1 (25)
	Time-point(s)	12 (80)	7 (58)	1 (25)
Diabetic retinopathy (DR)	Total number of SRs	4	4	0
	Title	4 (100)	4 (100)	NA
	Technique/Instrument	4 (100)	1 (25)	NA
	Measure	4 (100)	0 (0)	NA
	Time-point(s)	1 (25)	0 (0)	NA

- *Title* refers to name of the outcome (i.e., visual acuity, quality of life, contrast sensitivity).
- *Technique/Instrument* refers to how the outcome was measured (e.g., Snellen chart).
- *Measure* refers to the variable used to measure the outcome (e.g., continuous variable such as mean visual acuity).
- *Time-point(s)* refers to when the outcome was assessed (e.g., at 3 weeks; at 6 months).
- SR: systematic review
- NA: not applicable
